Under docket Number RSPA-99-5013 would like to see the term "release" defined within the regulations. The reason is because under 171.16(a) it states a report must be submitted for an unintentional release. Our company has spills while off loading into a customers tank. The customer has an NPDES permitted waste water treatment plant which the spill entered. Under EPA's definition of a release this incident would not be considered a release. Is it considered a release under DOT and is a Form 5800.1 report required.
